Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to a filter element, classified in class 210, subclass 502.1.
- II. Claims 27-52, drawn to a method for removing oil from an aqueous fluid, classified in class 210, subclass 693.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the product of Group I could be used in another method, different from that of Group II. For example, this filter element could be used to remove contaminants other than oil (e.g. suspended solids) from a fluid other than an aqueous fluid (e.g. organic liquids, air, etc.).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and

Art Unit: 1724

specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

In addition to the above noted restriction requirement, an election of species is also required. This application contains claims directed to the following patentably distinct species of the claimed invention:

- (1) first oleophilic polymeric material (e.g. SEBS, polyolefin, etc.); and
- (2) second oleophilic polymeric material (e.g. SEBS, polyolefin, etc.).

The species are independent or distinct because the different polymeric materials would appear to have different chemical properties. Currently, claims 1-3, 8, 10-16, 21, 23-29, 34, 36-42, 47 and 49-52 appear to be generic.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143), and (ii) an identification of the claims encompassing the elected invention.

Should Applicant traverse on the ground that the inventions or species are not patentably distinct, Applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
